Education

VJTI <i>Bachelor of Technology in Information Technology 8.68 CGPA</i>	November 2022 – Present <i>Mumbai, Maharashtra</i>
D.G Ruparel College of Arts, Commerce and Science <i>HSC Board, MHT-CET 99.60%ile</i>	February 2022 <i>Mumbai, Maharashtra</i>
The Dadar Parsee Youths Assembly High School <i>SSC Board, 92.40%</i>	March 2020 <i>Mumbai, Maharashtra</i>

Experience/Internships

DevLaunch - Tech Incubator <i>GenAI Intern</i>	January 2024 – Present <i>Remote</i>
- Actively designing and implementing a Genetic Algorithm entirely from scratch to generate Architectural Floor Plans and have received positive results (upto 86% area coverage). Crafting a comprehensive set of more than 10 algorithms within the fitness function, to consider parameters like an Architect's intuition metrics, local norms compliance, adherence to FSI (Floor Space Index) rules, and integration of Indian traditional architectural elements, resulting in an improvement in Floor Plan Quality.	

Projects

ChessAI 🔗 <i>Python, Pygame, Numpy, Artificial Intelligence, Genetic Algorithms</i>	November 2023
- Developed an intelligent AI opponent using the NegMax algorithm and Genetic Algorithm to evaluate moves and choose the best one. - Engineered a Python-based project, leveraging the pygame library for GUI development; optimized performance by 40% and decreased load time by 25% through efficient coding practices and structured design techniques. - Utilized the NegMax algorithm with alpha-beta pruning to determine optimal moves in the AI.	
Multilingual YouTube Video to PDF Converter 🔗 <i>Python, NLP, BART, moviepy, Pillow, React</i>	January 2024
- Led the ML team to develop a frame-by-frame analyzer, classifying important frames for inclusion in PDFs, showcasing expertise in video content analysis. - Engineered and implemented NLP solutions, including a frame-by-frame analyzer, image importance classifier, and topic identifier, demonstrating proficiency in language processing applications. - Orchestrated the integration of diverse NLP applications, such as a frame analyzer, summarizer, translator, and Q&A chatbot, within a Flask framework for a seamless and cohesive user experience.	
Natural Selection Simulation using Genetic Algorithm 🔗 <i>Python, Genetic Algorithms</i>	October 2023
- Coded a Genetic Algorithm-driven Natural Selection Simulation in Python, resulting in a remarkable 550% increase in organism health within the initial 40 seconds of simulation. - Engineered organisms with autonomous adaptation using machine learning and reinforcement techniques.	

Technical Skills

Languages: JavaScript, SQL, Java, C, C++, Python, HTML/CSS.

Domains: NLP, Machine Learning, Artificial Intelligence, Web Development.

Developer Tools: Git/GitHub, Postman, VS Code, Eclipse, Bootstrap Studio, IntelliJ Idea, PyCharm.

Technologies/Frameworks: GitHub, React, Tailwind, Flask, Linux, Various Python Libraries.

Leadership / Extracurricular

ProjectX Club Core Member at Community of Coders, VJTI	2022 – Present
- Got Selected through shortlisting and interview from all FYs for an exclusive mentorship program consisting of total 20 selected FYs. Developed a Project (ChessAI) under the guidance of seniors at CoC. - Took on the role of a Teacher while contributing to the Marketing and PR team of ProjectX. - Served as a Teacher and participated as an Organizer in the Coding Club's DSA workshop for junior members.	
ECCell <i>Sector Coordinator</i>	2023–Present <i>Marketing & Operations</i>
Proficient in managing operations for diverse social and community events.
