Education

VJTI <i>Bachelor of Technology in Information Technology 8.7 CGPA</i>	November 2022 – Present <i>Mumbai, Maharashtra</i>
D.G Ruparel College of Arts, Commerce, and Science <i>HSC Board, MHT-CET 99.60%ile</i>	February 2022 <i>Mumbai, Maharashtra</i>
The Dadar Parsee Youths Assembly High School <i>SSC Board, 92.40%</i>	March 2020 <i>Mumbai, Maharashtra</i>

Professional Experience

DevLaunch - A Startup from XLRI Tech Incubator <i>GenAI Intern</i>	January 2024 – Present <i>Remote</i>
- Completed Technical Feasibility Analysis by designing and implementing a Genetic Algorithm entirely from scratch to generate Architectural Floor Plans and have received positive results (up to 86% area coverage). Entrusted with the extension of the project, which involves designing a Floor Plan generator tailored for irregularly shaped plots. Crafting a comprehensive set of more than 15 algorithms within the fitness function, to consider parameters like an Architect's intuition metrics, local norms compliance, adherence to FSI (Floor Space Index) rules, irregularity, integration of Indian traditional architectural elements, etc, resulting in an improvement in Floor Plan Quality.	

Projects

ChessAI  <i>Python, Pygame, Numpy, Artificial Intelligence, Genetic Algorithms</i>	November 2023
- Developed an intelligent AI opponent using the NegMax algorithm and Genetic Algorithm - Engineered a Python-based project, leveraging the pygame library for GUI development; optimized performance by 40% and decreased load time by 25% through efficient coding practices and structured design techniques. - Utilized the NegMax algorithm with alpha-beta pruning to determine optimal moves in the AI.	
Multilingual YouTube Video to PDF Converter  <i>Python, NLP, BART, moviepy, Pillow, React</i>	January 2024
- Led the ML team to develop a frame-by-frame analyzer, classifying important frames for inclusion in PDFs, showcasing expertise in video content analysis. - Engineered and implemented NLP solutions, including a frame-by-frame analyzer, image importance classifier, and topic identifier, demonstrating proficiency in language processing applications. - Orchestrated the integration of diverse NLP applications, such as a frame analyzer, summarizer, translator, and Q&A chatbot, within a Flask framework for a seamless and cohesive user experience.	
Natural Selection Simulation using Genetic Algorithm  <i>Python, Reinforcement learning</i>	October 2023
- Coded a Genetic Algorithm-driven Natural Selection Simulation in Python, resulting in a remarkable 550% increase in organism health within the initial 40 seconds of simulation. - Engineered organisms with autonomous adaptation using machine learning and reinforcement techniques.	

Technical Skills

Languages: JavaScript , SQL, Java, C, C++, Python, HTML/CSS , PHP
Domains: NLP, Machine Learning, Artificial Intelligence, Web Development, Computer Vision, Reinforcement learning, Web Browsers
Developer Tools: Git/GitHub, DNS, Google AdSense, Search Console, Cloudflare , SSL ,nodeJS,React, MongoDB, Vercel, Figma, Kaggle, Jupyter, Slack, Postman, Eclipse, Bootstrap Studio, IntelliJidea, PyCharm, MySQL Workbench.
Technologies/Frameworks:React, Tailwind, Flask, Linux, Various Python Libraries(OpenCV, Tensorflow, Keras, etc)

Leadership / Extracurricular

ProjectX Club Ex-Mentee and Media Head at Community of Coders, VJTI	2022 – Present
- Got Selected through shortlisting and interviews from 250+ FYs for an exclusive mentorship program consisting of a total of 20 selected FYs. Developed a Project (ChessAI) under the guidance of mentors at CoC. - Took on the role of a Mentor while contributing as a Media Head of ProjectX. - Served as a Teacher in various workshops and implemented various innovative ideas as a Media Head to promote coding on our campus.	
ECell <i>Sector Coordinator</i>	2023–Present <i>Marketing & Operations</i>
Proficient in managing operations for diverse social and community events.
